

Summary of Speed Map Panels Images

- 1) Introduction: The Transport Department has installed 5 speed map panels (SMP) on the major highways towards Kowloon in the New Territories to provide motorists with real-time traffic information. Each panel shows a schematic map of the major routes ahead. On different road sections, different colours represent different traffic speeds: red for congested traffic and speed is very slow, amber for slow traffic and green for smooth traffic and speed is normal. The panels also indicate the average journey time for the major highways.
